

STURDY Builder Chute

The STURDY Builders Chute is an ideal waste removal system that can be used in many different areas of the construction industry.

Ideal for the removal of site waste in all areas of the construction industry and helps keep work areas relatively dust free.

The system is suitable for any scaffolding height. Frames can also be bolted to concrete floors using the Steel Fixing Clamp.

It is a strong and durable waste removal system which can be easily assembled without removing scaffolding boards.

The top or starter chute can be fitted with a metal frame that attaches to scaffolding or bolts to a concrete floor.

All metal parts are galvanised to prevent against rusting.

An intermediate chute is also available. This allows entry to the system on different scaffolding levels. A fixing frame is also available for this section to reinforce the system.

The chute section incorporates signage panels which allow for personalisation with a company's corporate logo to advertise and promote the company. Available in a range of colours.

The plastic sections are manufactured from U.V. stabilised LLDPE and are fully recyclable.

Top Section

Length: 750mm
Height: 1100mm

Top Diameter:
480 to 500mm

Code: 219 - A

Intermediate Section Fixing Frame

Code: 222 - A

Intermediate Section

Length: 1,100mm
Height: 1,100mm

Top Diameter:
480 to 500mm
Bottom Diameter:
415 to 430mm

Code: 220 - A

Intermediate Frame for Scaffolding (Optional)

Code: 222 - B

Chute Section

Height: 1,100mm

Top Diameter:
550 to 570mm
Bottom Diameter:
400 to 430mm

Code: 221 - A
