

STURDY ROAD GUARD

High Visibility Traffic Management

The STURDY Road Guard fills the "Gap" in the market!

The STURDY Road Guard Advantages!

The STURDY Road Guard range of products are visually substantial and commands the respect of pedestrians and drivers alike as it forms a continuous traffic management system with **no gaps** between each unit. This prevents pedestrians and workers from stepping through them.

It is a safer and a more practical alternative than road markers or cones as it has longer road coverage than many similar products currently on the market.

Each STURDY Road Guard weighs less than recommended manual handling loads and can be easily arranged by just one person.

It has a low centre of gravity and can be partially filled with water to 'anchor' it in place. Holes are strategically placed to prevent the unit being overfilled and becoming too heavy to be manually handled.

Personalisation available for large quantity orders. Each unit has a panel for customer signage.

Forklift slots allow for the lifting of stacked units.

Unique, Starter, Intermediate and End units are also available. Class 2 reflective warning signage can be applied as an optional extra.

The system is extremely flexible and only 3 units are required to obtain a 90 degree bend giving approximately a 3m radius.

The unique stacking feature helps during transportation and storage, (see reverse).

All units are manufactured from UV stabilised polyethylene and are 100% recyclable.

100 units giving 200 liner meters can be delivered to sites on one 40ft trailer.

The STURDY Road Guard is ideal for:

Traffic Rerouting

Building / Construction Sites

Temporary Road Closures

Car Parks

Contraflow Systems

Airport / Ferry Terminals

Sports or Special Events

Footpath Detours

The STURDY Road Guard is the ultimate in function and effectiveness!

- The STURDY Road Guard is much more convenient than concrete or steel barriers as no heavy lifting equipment is needed.
- Each unit gives 2 meters of full road coverage.
- The highly visible system has a clean, solid look with no gaps between units and it avoids the clutter and confusion of multi device work zones. Drivers can easily determine the changes ahead.
- Units can be partially filled with water to anchor them in place and prevent it from being accidentally turned over.
- The system is effective in all weather conditions. The UV stabilised polyethylene plastic will not fade or discolour in sunlight.

STURDY Road Guard Dimensions:
 Length: 2.43m (2 m road coverage)
 Height: 1.075m
 Width: .66m
 Product Code: 384 - A

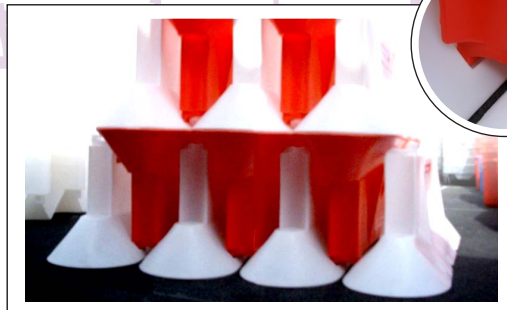

Starter Road Guard Dimensions:
 Length: .830m
 Height: 1.325m
 Width: .66m
 Product Code: 386 - A

End Road Guard Dimensions:
 Length: .830m
 Height: 1.325m
 Width: .66m
 Product Code: 386 - A

Transport & Storage

The STURDY Road Guard's unique stacking feature helps during transportation and storage. When stacking, every second unit is inverted. Stacking lugs are located on top of each product and lug receivers are located near the base. Each lug fits neatly into the receiver allowing each STURDY Road Guard to lock into the next.

Make the STURDY Road Guard part of your traffic control plan!
